Nail Laminated Columns

Littfin Truss Company offers a 60-YEAR WARRANTY on our Nail Laminated Columns.

Littfin laminated columns are manufactured using CCA pressure treated lumber in the treated portion of their columns. This portion of the column has been treated to a total retention of .60 pounds of CCA preservative per cubic foot of wood.

This warranty is extended to the original buyer of the product and concerns only the replacement of the columns. Other expenses such as labor, freight, loss of service, or any other cost not explicitly stated in this warranty are not covered.

It is the responsibility of the original buyer to insure that the columns have been properly handled, stored, incorporated into the total building design per the building engineers specifications, and installed per the manufacturers specifications.

This warranty does not apply to damages caused by natural disasters or any incident that is out of the control of Littfin Truss Company.

Littfin Laminated Columns

with **Finger Jointed Splices**

For over 40 years, quality builders have relied on Littfin Truss to provide them with quality engineered wood products. We are proud to introduce our latest engineered wood product.

Littfin Laminated Columns feature treated (.60 retention) #1 Southern Pine bottoms and SPF Machine Stress Rated Lumber (MSR) in the untreated portion of the column. MSR provides greater strength than visually graded lumber, and SPF offers better stability than Southern Pine.

The adhesive used in the finger joints conforms to ASTM 2559, and rigorous daily testing insures structural quality finger joints. Laminations are fastened using ring-shank stainless steel nails below grade and ring shank corrosion resistant nails above grade along with construction adhesive that conforms to ASTM C557.

Builders across the Midwest have long known that Littfin is a name you can count on for quality and service. That and a 60-YEAR WARRANTY give you the assurance of quality that is second to none.

- **13% More Wood than Glulams = Greater Strength**
- **Nailed and Glued for Superior Strength**
- **More Stable than Solid Sawn Posts**
- **More Thorough Treatment than Solid Sawn Posts**
- **Structural Finger Joints = Greater Strength than Butt-Spliced Columns**
